EFFEGI BREGA®

"SOFT-RELAX"

- ROTARY DRUM CLEANER-

It is now possible to automatically remove the water-soluble support materials from 3D printer (PolyJet tecnology) horse shoes shaped with the new "Soft-Relax". The rotary drum washing machine, with a proper jet of cold water, cleans the 3D printed and makes them available for use. Convenient, fast, and simple equipment that will make you save time and money simply by using water from the mains and reducing the time for the operator.

Control panel

- ON
- Start
- Stop
- 3 Leds
- 3 different colours for each led
- Combination of colours and positions to signal, by intuition, the operating conditions of the appliance.

Loading door

The operator can load up to a maximum of 15 3D pieces .

Signaled alarms:

The leds can signal the following conditions:

- Appliance ready
- Single cycle
- Double cycle
- Triple cycle
- Door not closed
- Pre-warning: service within 30 hours
- Warning: call for service
- Number of hours worked.

Cleaner for 3D printer pieces

- Simple: just load and press START.
- Easy to use: an electronic motherboard manages all the services and signals using intuitive leds.
- It's acts gently on materials.

Debris collection basket

The machine discharges sideways into the sink of the workbench. To avoid the clogging of the drain due to waste and pollution, the device is provided with a perforated basket which retains the detached materials having a diameter greater than 3 mm
