

EFFEGI BREGA®

- Light – Curing Unit -
“CLICHÉ”

Multipurpose curing unit for photo curing resins and composites:

- ✓ LED curing with no heating.
- ✓ Emission range from 380 to 540 nm.
- ✓ Possibility to carry out 4 cycles at ambient pressure (30, 60, 180 e 300 sec).
- ✓ Possibility to carry out 4 cycles with vacuum (30, 60, 180 e 300 sec).
- ✓ Possibility to reprogram the schedules of the program.
- ✓ Possibility to turn on the flash of the light with times defined by the operator.

The presence on the market of many types of composites and resins requires the optimization of the photopolymerization process and requires the possibility of varying the field of application of the LED light: Cliché is the answer to every need!

With a polymerization chamber and a reflecting base, the diffusion of uniform light is achieved without shaded areas, ensuring a complete and safe photopolymerization of all the material.

With CLICHÉ it is possible to realize: inlays, onlays, aesthetic crowns, aesthetic coverings on metal, custom trays, bite guards, spacings for abutments with lacquers and any processing or devices for which photosensitive materials are required.
